Abstract submission for the ICE2020

ICE2020, the Joint Annual Meeting of two established societies in the field of electrocardiology, the International Society of Electrocardiology (ISE) and the International Society for Holter and Noninvasive Electrocardiology (ISHNE), will be held in Belo Horizonte, Brazil, from 25 to 27 June 2020. Production of new scientific knowledge is an essential activity of these societies and the best way of catapulting this activity is through an open call for new advances in the field. These spontaneous contributions should be submitted in the format of abstracts, to be presented at dedicated sessions the ICE2020.

ICE2020 will give special attention to abstract presentation. All abstracts will be published in an online supplemental issue of the Journal of Electrocardiology, an authoritative and traditional scientific journal in this field. The highest ranked abstracts will be presented orally in specific sessions, allowing discussion with senior specialists. Posters will be presented in specific sessions and will be presented to an evaluation committee, with international members of the societies. A specific track will be devoted to interesting clinical ECG case reports, offering an opportunity to understand and discuss rare and complex ECG tracings. For those under 35 years of age at the date of the Congress, the Young Investigator's Award provides an excellent opportunity to have original work recognized and perhaps awarded a US\$500 first prize in an International Congress.

Abstract submission period - including the Young Investigator's Award - has been extended until February 3rd. Access www.ice2020brasil.com and submit your best science to ICE2020!
